RAHULDEV MUTHAMSETTY

Technology Project Builder

Turning ideas into scalable products with code, creativity, and AI.

CONTACT DETAILS

LOCATION
India (Open to Relocation)

TARGET ROLES

Associate Product / Tech Product Associate
Translate user needs into product specs, roadmaps, and execution.

Junior Python / Backend Developer
Engineer scalable backend systems, data pipelines, and robust APIs.

LANGUAGES

Telugu	Native
Hindi	Native / Fluent
English	Professional
Kannada	Conversational

IDEAS → PRODUCTS → IMPACT

BUILD: Develop prototypes using AI workflows & open-source tools.

SOLVE: Explore technical challenges & connect components.

DELIVER: Turn concepts into structured user workflows.

GROWTH MINDSET & DRIVE

"Quickly grasp new concepts, passionately master emerging tech stacks, and dedicate 100% to achieving excellence in every challenge."

ECE STUDENT | TECHNOLOGY PROJECT BUILDER

PROFESSIONAL SUMMARY

Electronics and Communication Engineering student at Presidency University with a proven track record of engineering tech products, AI-assisted software workflows, and digital platforms. Demonstrates strong capabilities in leveraging open-source frameworks, modern AI developer tools, and complex backend architectures. Experienced in building real-time financial engines, hyperlocal discovery platforms, and creator marketing ecosystems. Combines technical acumen, structured project management, and an entrepreneurial mindset to deliver high-impact solutions. Fluent in Telugu, English, Hindi, and Kannada, and actively seeking international opportunities.

EDUCATION & ACCELERATOR

Presidency University
B.Tech in ECE | Bengaluru, India
Focus: Core Electronics, Signal Processing, Communication Systems, Embedded Logic.

Indian Startup School (ISS)
Startup Accelerator Program (2026)
Focus: Venture Building, Product-Market Fit (PMF), Business Execution, Growth Strategies.

FEATURED TECHNOLOGY PROJECTS

X BOT — AI-Powered Intraday Trading Analysis System

Python | FastAPI | WebSockets | Protocol Buffers | Upstox API

- Engineered a modular trading engine featuring **18 analytical modules** (technical indicators, multi-timeframe analysis, market regime detection).
- Integrated order-flow mechanics: liquidity sweeps, momentum, bid/ask pressure, and DOM tracking.
- Utilized Upstox API for real-time tick aggregation and low-latency data streaming pipelines.
- Implemented paper trading execution, confidence scoring, trade logging, and automated Telegram alerts.

CribCreww — Hyperlocal Social Discovery Platform

Product Design | Community Tech | Gamification

- Designed a city-centric discovery engine enabling seamless local discussions, events, and venue discovery.
- Built real-time 'Live Feed & Explore' workflows featuring trending spaces, user reviews, and reaction engines.
- Architected interest-based clubs, localized meetups, and location-driven gamification systems.

BrandXBridge — Creator Marketing & Performance Platform

Creator Economy | Analytics | Marketplace

- Built a performance-focused marketplace connecting brands directly with digital content creators.
- Mapped end-to-end campaign models, tiered incentive structures, and automated matching workflows.

TECHNICAL SKILLS & CAPABILITIES

DOMAIN	TECHNOLOGIES & FRAMEWORKS
Backend & Systems	Python, FastAPI, REST APIs, WebSockets, Protocol Buffers, SQLite, C/C++
Frontend & UI	React.js, TypeScript, Analytics Dashboards, System Monitoring, Event-Driven UI
Development Approach	Open-Source Integration, AI-Assisted Workflows, Code Optimization, Prototyping
Product Strategy	Product Roadmapping, Go-To-Market (GTM), Hyperlocal Ecosystems, Analytics
Tools & Platforms	Git, Docker, VS Code, Postman, PostgreSQL, Upstox API, Linux/macOS CLI

WHY I'M A GREAT FIT

✓ Ships Real Products
Proven record of taking complex ideas from concept to functional code and execution.

✓ Fast Learner & Adaptable
Rapidly masters emerging technologies, modern AI developer workflows, and toolstacks.

✓ Product & Tech Mindset
Combines solid technical foundations with high-level user and business strategy.

✓ Multilingual Collaborator
Fluent in Telugu, English, Hindi, & Kannada with strong cross-functional communication.

RAHULDEV MUTHAMSETTY

FINAL YEAR PROJECTS

Electronics and Communication Engineering

PROJECT FOCUS

· Signal Processing

· Deep Learning

· Video Reconstruction

· IoT & Embedded Systems

· Sensor-Based Monitoring

· Fault Detection & Alerts

REAL-WORLD VALUE

Research-led problem solving: reduce data demands, improve monitoring, and support faster maintenance decisions.

BUILD · TEST · IMPROVE

Applying engineering fundamentals to practical challenges in connected and data-intensive systems.

ECE STUDENT | TECHNOLOGY PROJECT BUILDER

FINAL YEAR PROJECTS

Engineering projects focused on efficient video reconstruction and intelligent streetlight monitoring.

PROJECT 1

Efficient Video Reconstruction Using Variational Autoencoder for Compressive Sensing

Python-based compressive sensing and neural-network reconstruction

Python | Compressive Sensing | VAE | Deep Learning

OVERVIEW

Explores combining compressive sensing with variational autoencoders (VAEs) to reconstruct video from fewer measurements while aiming to retain visual quality. The approach uses learned latent representations to support reconstruction with lower data requirements.

WHY IT MATTERS

Video carries large data volumes. More efficient reconstruction could be useful for bandwidth-limited streaming, resource-constrained devices, and IoT video applications. The project builds experience at the intersection of signal processing, machine learning, and data-efficient media systems.

PROJECT 2

Centralized Monitoring System for Streetlight Fault Detection and Location Tracking

IoT-based streetlight control, monitoring, and fault alerts

ESP32 | LDR / IR Sensors | GSM | IoT

OVERVIEW

Uses an ESP32 to monitor two streetlights, LDR sensors to detect ambient light and lamp status, and IR sensors to detect vehicles. Brightness increases when a vehicle is present at night and reduces when roads are clear. If a lamp fails at night, a GSM module sends an alert identifying the faulty light.

WHY IT MATTERS

Could help municipalities identify failures sooner, reduce manual inspection effort, support timely repairs, and lower unnecessary power use through adaptive brightness. The design demonstrates practical IoT integration for smarter, safer, and more maintainable public infrastructure.

ENGINEERING OUTCOME

Two complementary problem areas: data-efficient video processing and responsive IoT infrastructure monitoring.
